

## Secure Mobile File Management for Enterprise Mobility Users

GroupLogic's mobilEcho enables enterprise IT to provide secure access to enterprise file servers for mobile device users, eliminating the headaches of employees using unsafe and non-compliant alternatives such as consumer-based services and applications.

mobilEcho ensures that all corporate files and assets can be securely accessed by the right people. mobilEcho drives business value in several ways, including:

- **Mitigated Risk:** mobilEcho ensures mobile file access adheres to your corporate security policies and files are properly protected.
- **Regulatory Compliance:** mobilEcho helps organizations meet compliance regulations regarding data and file access. This eliminates costly fines and embarrassing PR exposure.
- **Reduced IT Management Cost:** mobilEcho provides simple yet comprehensive tools for your IT team to ensure they meet their security, compliance and management objectives in a cost-effective manner.
- **Improved Employee Productivity:** Mobile devices allow greater access to information which can improve decision-making, increase customer satisfaction, and improve profitability. mobilEcho allows enterprises to support both corporate-owned and employee-owned devices.
- **Competitive Differentiation:** Meet security needs and arm your employees with the devices they want and need to better complete their tasks and meet operational objectives that set you apart from competitors.

### Key Features:

- Simple for the end-user; no training required
- Centralized Management
- Enterprise Security
- Secure PDF Annotation
- Two-way sync and offline file access

### Empower Your Mobile Employees:

- Senior Executives on-the-go enabled to make quick decisions with anytime, anywhere access
- Sales Executives in front of customers are speeding up the sales process with instant access to collaterals
- Field Service Workers have secure access to critical docs, improving productivity and SLA compliance
- Corporate Team Members drive team collaboration through mobility

## Simple. Secure. Managed.

### Simple

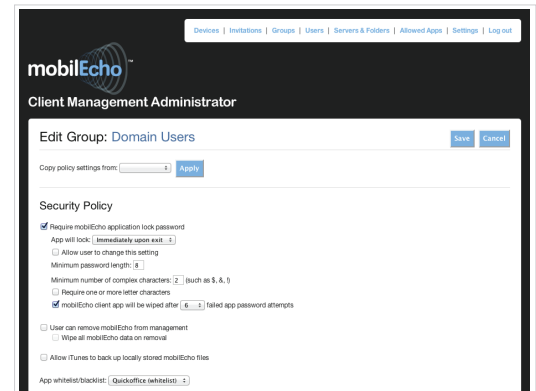

- Users can access, browse, preview and search files on corporate file servers.
- The intuitive interface requires virtually no end-user training.
- For IT, mobilEcho can be deployed in less than 10 minutes.
- With one-way and two-way syncing, business units can keep employees up-to-date with the latest materials (ex. Sales presentations, collaterals, service manuals, etc.).
- My Files feature allows users to store files safely and securely for offline file access.
- AD Home Directory Support allows users to get access to their individual files in their home directories.

mobilEcho client app is simple for the end user.

### Secure

- Active Directory support allows enterprises to integrate mobilEcho into existing corporate security infrastructure.
- HTTPS Reverse Proxy password and certificate authentication support.
- Whitelisting/blacklisting of 3rd party apps allowed to open mobilEcho files.
- Secure PDF preview and annotation within the mobilEcho app to meet corporate security, compliance and governance standards.
- Secure network and on-device encryption w/ HTTPS and Apple Data Protection.
- Selective Remote Wipe.

mobilEcho server is secured and managed by IT.

### Managed

- mobilEcho's Client Management system gives enterprises the flexibility to decide the best policies for their organization. Many features are configurable by the administrator to ensure alignment with corporate governance, compliance and security needs.
- Network Reshare and DFS (Distributed File System) support.\*
- Integration with key mobility partners including Good Technology, MobileIron, Quickoffice and Salesforce.com.

### System Requirements

The mobilEcho solution consists of two components; server software and a free client app available for download on the appstore. The system requirements are as follows:

#### Server Requirements

mobilEcho Server can be installed on both server and workstation-class versions of the Windows operating system. For optimal results, your Windows machine should be running the latest service pack from Microsoft.

#### Windows System Requirements

- Windows server platforms: 2008 (inc. R2), 2003 (inc. R2)
- Windows workstation platforms: Windows 7, Vista, XP Pro SP3

#### Client Requirements

##### mobilEcho Client Application Supported devices:

- iPad, iPad2
- iPhone 3G, 3GS, 4, and 4S

##### mobilEcho Client Application Supported OS's:

- iOS 4.2 or later

\*Subscription Licenses only.
