

MassTransit Premier Overview

MassTransit Premier is the only enterprise Managed File Transfer (MFT) solution proven to transform digital file transfers into strategic business processes. MassTransit's easy-to-use interfaces enable virtually any user to successfully and productively transmit large files and folders to remote sites and users. And the product's business, workflow and IT management tools empower users and IT personnel to manage all aspects of the file transfer process providing visibility, accountability and security and linking workflows across the Internet.

MassTransit Premier delivers an extremely easy-to-use, highly reliable way to move large, valuable files in high volume. By simplifying the file exchange process and offering easy access to any user within the enterprise, MassTransit encourages users throughout the enterprise to take advantage of it, ensuring fastest adoption and helping customers maximize the benefits of Managed File Transfer to their organization.

MassTransit offers the ability to e-mail users URL-based links to received files, which, when clicked, automate the authentication process and make it very simple for users to download files and folders sent to them through MassTransit. In addition, the new product's Active Directory features allow users to very easily identify and send files to any user within or outside their organization.

MassTransit Premier increases productivity by seamlessly automating file transfers. Efficient file transfer business processes incorporate a high level of automation, allow for customer-specific business logic and seamlessly integrate with other elements of the enterprise. MassTransit incorporates integration, customization and automation tools that further enhance the product's ability to tie into other systems and increase productivity.

MassTransit Premier unlocks the value of time for customers and delivers a high return on investment (ROI) as compared to conventional shipping, managed service networks, FTP-based software solutions, and other methods of file transmission.

Additionally, MassTransit offers customers a comprehensive set of workflow automation, integration and customization features which, taken together, allow customers to achieve highly automated file transfer workflows. These features include the product's powerful "Actions" capability for event-based initiation of automated / custom processes, as well as a comprehensive set of APIs that allow integration with other solutions in a customer's environment.

MassTransit's business tools provide visibility, accountability and control over mission-critical file transfers. Key to providing users with effective Managed File Transfer business processes is giving IT / Systems personnel the tools they need to optimally manage file transfer infrastructure and deliver on user expectations. One of the key features provided by MassTransit Premier for Systems / IT and business management personnel is a powerful reporting and analytics tool. From an IT management perspective, this tool allows analysis of the detailed, comprehensive log and other data collected in MassTransit's MySQL database to gain valuable insight into system performance, system usage, load and errors and more.

MassTransit offers a "Windows Management Interface" or "WMI" interface for Windows-based MassTransit servers. This WMI interface allows MassTransit to be monitored by external monitoring solutions, including Perform, Microsoft's built-in WMI monitoring tool, as well as Microsoft Operations Manager ("MOM") and other similar network and application monitoring tools.

MassTransit Premier protects confidential data with comprehensive security features. Securing confidential data through corporate security policies is critical in today's business environment. MassTransit offers valuable features that enforce customers' standard Active-Directory based security policies and offer encryption of file transmissions via state-of-the-art methods. MassTransit helps customers ensure the highest level of security for their Internet-based digital file transfers by offering a comprehensive security feature set and encryption options.

MassTransit Premier supports every file transmission workflow. From fully automated server-to-server workflows for high volume transmissions, to Web Client-to-server options for lower-volume, desktop driven transfers, the product provides a range of easy-to-use transfer options for exchanging large, high-value-added digital assets. With a single MassTransit Premier software solution, customers can cover all of their file transfer workflow needs including a full suite of FTP transfer processes.

MassTransit is trusted by organizations across the globe to manage their high volume, mission-critical file transfers. Find out what MassTransit Premier can do for you.
